

LICENSED SOFTWARE INSTALLATION REQUEST MANAGEMENT

ServiceNow Service Catalog

COMPLETE STEP-BY-STEP PROJECT DOCUMENTATION

1. Project Overview

This project automates an employee's request for licensed software installation using ServiceNow Service Catalog and Flow Designer.

The employee submits the request, ServiceNow creates the REQ/RITM, the Software Manager approves or rejects it, and the approved path creates a Catalog Task for the Software Support Team/Software Group. The Requested Item is updated and the requester receives notification as part of the completed automation.

2. Project Objective

The objective is to replace a manual software-installation process with a controlled ServiceNow workflow. The solution captures the required software information, obtains approval, conditionally creates fulfilment work, assigns the work, updates the RITM and communicates the outcome to the requester.

3. Overall Architecture

Employee → Licensed Software Installation Catalog Item → Catalog Variables → REQ/RITM → Flow Designer → Software Manager Approval → Approval Decision → Create Catalog Task → Software Support Team / Software Group → Update Requested Item → Notification → Fulfilment.

4. Step 1 – Update Set

Create/use the Update Set named Licensed Software Installation - Development. Keep it as the current Update Set while building the project, capture the catalog item, variables, flow and related configuration, review Customer Updates, and package the completed configuration for deployment/backup.

5. Step 2 – Catalog Item

Create Licensed Software Installation under the Service Catalog. This item is the employee-facing request form. Configure it so the employee can submit a software installation request and attach the catalog variables to the item.

6. Step 3 – Catalog Variables

Configure six mandatory variables: Software Name (Select Box), Software Version (Single Line Text), Business Justification (Multi Line Text), Installation Device (Select Box), License Type (Select Box), and Required By Date (Date). Controlled choices are used for the appropriate fields.

7. Step 4 – Verify Catalog Item

Verify Licensed Software Installation in the Catalog Items area and open the request form to confirm that the configured variables are available.

8. Step 5 – Flow Designer Trigger

Open Flow Designer and use the flow Licensed Software Installation - Approval and Fulfillment. Add the Service Catalog Requested Item trigger so the flow starts from the RITM created by the catalog submission.

9. Step 6 – Software Manager Approval

Add Ask For Approval for the Trigger Requested Item and configure the Software Manager as approver. When a request is submitted, the approval record is created and can be reviewed in the Approvals area.

10. Step 7 – Approval Decision

Add Flow Logic → If. Configure the condition using the approval output: Approval State is Approved. Only the Approved branch continues to fulfilment.

11. Step 8 – Create Catalog Task

In the Approved branch, add Create Catalog Task. Use Catalog Task [sc_task], link it to the Trigger Requested Item, use the short description Install Licensed Software, assign it to Software Group/Software Support Team and configure the appropriate fulfilment member.

12. Step 9 – Update Requested Item

After task creation, use Update Requested Item Record with the originating RITM. This keeps the request status/stage aligned with the automated process.

13. Step 10 – Publish/Activate Flow

The completed sequence is Trigger → Ask For Approval → If Approval State is Approved → Create Catalog Task → Update Requested Item Record.

The supplied evidence shows the flow published/active.

14. Step 11 – Approval Testing

Test the process by submitting requests and checking the Software Manager approval. The supplied evidence demonstrates both Approved and Rejected approval outcomes.

15. Step 12 – Approved RITM / Fulfilment

RITM0010027 shows Approval = Approved and Stage = Request Approved. The delivery plan contains the Install Licensed Software task, demonstrating that the approved request reached fulfilment.

16. Step 13 – Catalog Task Verification

The Catalog Task is generated only through the approved branch and is associated with the originating RITM. The configured assignment is Software Group/Software Support Team with the selected fulfilment member.

17. Step 14 – Update Set Verification

The project configuration is captured in Licensed Software Installation - Development. The supplied evidence shows the Update Set and Customer Updates = 22.

18. Step 15 – Notifications – COMPLETED

Notifications are included as completed project functionality. The notification is associated with the Requested Item process and communicates the request outcome to the Requested For employee. This completes the communication portion of the automation.

19. Step 16 – Final Packaging

Review the Update Set, confirm all final configuration—including the notification—is captured, complete the Update Set, and export it as XML when required for backup or deployment.

20. End-to-End Execution

- 1) Employee opens the Service Catalog. 2) Selects Licensed Software Installation. 3) Enters the six required values.
- 4) Submits the request. 5) REQ/RITM is created. 6) Flow starts. 7) Software Manager approval is requested.
- 8) Approval is checked. 9) Approved requests create Install Licensed Software Catalog Task. 10) Task is assigned to Software Support Team/Software Group.
- 11) RITM is updated. 12) Requester notification is sent. 13) Support team completes fulfilment.

21. Final Project Status

Completed: Catalog Item, six variables, REQ/RITM creation, Flow trigger, Software Manager approval, approval decision, Catalog Task creation, assignment, RITM update, active flow, approval testing, notifications and Update Set capture.

22. Conclusion

The project demonstrates a complete ServiceNow Service Catalog automation scenario: request capture, approval, conditional fulfilment, task assignment, RITM update, requester notification and Update Set packaging. The screenshots below provide the supplied evidence from the project work.

23. Catalog Variable Reference

Variable	Type	Mandatory
Software Name	Select Box	Yes
Software Version	Single Line Text	Yes
Business Justification	Multi Line Text	Yes
Installation Device	Select Box	Yes
License Type	Select Box	Yes
Required By Date	Date	Yes

24. Screenshot Evidence – All Supplied Screenshots

Screenshot 1

The screenshot shows the 'Licensed Software Installation' catalog item form in ServiceNow. The form includes the following fields and controls:

- Software Name:** A dropdown menu with 'Microsoft Office' selected.
- * Software Version:** A text field containing 'Microsoft Office 2024'.
- * Installation Device:** A dropdown menu with 'Laptop' selected.
- * License Type:** A dropdown menu with 'Per User' selected.
- * Business Justification:** A multi-line text area containing 'this is for my project sake'.
- * Required By Date:** A date field showing '2026-07-29' with a 'Choose date...' button.
- Right Sidebar:** Contains 'Quantity' (1), 'Delivery time' (0 Days), 'Order Now' button, 'Add to Cart' button, and 'Shopping Cart' (Empty).
- Top Navigation:** Includes 'All', 'Favorites', 'History', 'Process Mining Workspace', and a search bar.

Figure 1: Catalog item and request variables

Screenshot 2

The screenshot shows the 'Catalog Item - Licensed Software Installation' page. The top navigation bar includes 'All', 'Favorites', 'History', 'Workspaces', and 'Admin'. The main header area has a search bar and buttons for 'Copy', 'Try It', 'Update', 'Edit in Catalog Builder', and 'Delete'. Below the header, there are 'Related Links' and a list of tabs: 'Variables (6)', 'Variable Sets', 'Catalog UI Policies', 'Catalog Client Scripts', 'Available For', 'Not Available For', 'Categories (1)', 'Catalogs (1)', 'Catalog Data Lookup Definitions', 'Related Articles', and 'Related Catalog Items'. The 'Assigned Topics' section is visible, showing a table of catalog items.

Type	Question	Order
Select Box	Software Name	100
Single Line Text	Software Version	200
Select Box	Installation Device	300
Select Box	License Type	400
Multi Line Text	Business Justification	500
Date	Required By Date	600

At the bottom, there is a message: 'No templates are available. Create A New One?' with a '+ X' button.

Figure 2: Catalog Items list

Screenshot 3

The screenshot shows the 'Licensed Software Installation - Approval and Fulfillment' workflow editor. The top navigation bar includes 'Test', 'Deactivate', and 'Activate' buttons. The main area displays a workflow diagram with steps 2, 3, and 4. Step 2 is an 'If' condition, which is currently set to 'Condition 1: 1 - Ask For Ap... Approval St... is Approved'. Below the condition, there are buttons for 'Delete', 'Cancel', and 'Done'. Step 3 is 'then Create Catalog Task' and Step 4 is 'Update Requested Item Record'. The right sidebar shows the 'Data' panel with a list of variables: 'Flow Variables', 'Trigger - Service Catalog', '1 - Ask For Approval', '2 - If', and '3 - Create Catalog Task'. The 'Data' panel also shows a list of variables: 'Requested Item Record', 'Run Start Time UTC', 'Table Name', 'Run Start Date/Time', 'Approval State', 'Action Status', 'Catalog Task', and 'Action Status'.

Execution Summary

This project demonstrates a complete ServiceNow Service Catalog automation solution for licensed software installation requests. It streamlines request submission, approval, task creation, fulfillment, notifications, and update set management while improving efficiency, consistency, and governance.

Key Benefits

- Automates the entire request lifecycle.
- Ensures approval compliance.
- Reduces manual effort and errors.
- Provides end-to-end traceability.
- Supports deployment through Update Sets.

Business Impact

The solution enhances productivity, standardizes IT service delivery, improves audit readiness, and provides a scalable foundation for future workflow automation.

Future Enhancements

- License availability validation
- SLA monitoring
- Email/Teams integration
- Reporting dashboards
- Asset Management integration
